Dear Chairman Grassley and Ranking Member Wyden,

The undersigned are writing to urge you to finalize a long-term reauthorization of PCORI, maintain its current funding sources, and continue its mandate to conduct comparative clinical effectiveness research (CER). The Friends of PCORI Reauthorization is a coalition of 184 patient and family caregiver organizations, health provider associations, biopharma/life science companies, payers, and other interested entities and individuals supportive of PCORI’s patient-centered mission and reauthorization.

While the PCOR Trust fund was extended through November 21st in the Continuing Resolution (H.R. 4378/ PL 116-59), it did not extend the funding mechanisms for PCORI to receive FY2020 funds during this short extension. Without this funding, PCORI will be unable to fund new research and its ongoing operations will be negatively impacted. Our priority is to ensure that long-term and consistent funding for PCORI be reauthorized. However, we also urge that if there is another short-term extension, PCORI’s funding streams be continued as well.

As of June 2019, PCORI has awarded more than $2.4 billion in grants and contracts to more than 700 research-related projects in 44 states across the U.S. Among PCORI’s signature achievements in its first 10 years has been the creation of a new paradigm for conducting research that better integrates patient perspectives. PCORI uniquely funds patient-centered outcomes research that engages patients throughout the research process, including in the research design, so that it captures outcomes that matter to patients to improve health care decisions. PCORI research provides a wealth of valuable data for patients and health care providers, while also informing how the health care system can be more efficient.

PCORI’s mission is to generate relevant, trustworthy evidence to help all Americans make informed healthcare decisions. In particular, addressing the healthcare needs of older Americans is one of PCORI’s major areas of research. PCORI has funded 134 studies involving older adults more than 30 of which are specifically designed to help older adults and their caregivers make better-informed decisions about their healthcare options. PCORI-funded research is helping older adults stay in their homes longer and lead healthier, more resilient lives.
Enact a Long-Term reauthorization of PCORI that maintains its current funding mechanisms

Research is a long-term endeavor, and some high quality CER studies can take 4-5 years to complete. Even after the completion of these studies, additional time is needed to develop and implement clinical decision support and shared decision-making tools. For the ongoing investment in PCORI-funded research to be most impactful, stability in PCORI funding is imperative to allow ample time to conclude studies, disseminate the findings, develop implementation tools, and drive implementation where appropriate. Reaffirming a long-term commitment to PCORI’s patient-centered mission will allow the Institute to build on its success in changing the culture of research and will enhance its work in partnership with other agencies and stakeholders to support a sustainable infrastructure for disseminating and implementing research outcomes in a manner that improves healthcare decision-making between patients and their providers.

The ROI on Medicare’s investment in PCORI is already very high. Much of PCORI’s work focuses on older adults—with results that can help older adults achieve the outcomes they want, reduce the burden major health problems impose on them, and even lower their costs. PCORI-funded research also reinforces the Centers for Medicare and Medicaid Services’ (CMS) efforts to advance an informed healthcare system that improves health care decision-making by patients and their providers. No other type of organization does the type of research PCORI does, and consistent, predictable funding is imperative to resource their work.

Maintain PCORI’s mandate to conduct comparative clinical effectiveness research

High-quality, evidence-based care is crucial to reducing costs in the healthcare system. PCORI is the only research organization dedicated to funding studies that compare care approaches to determine what works best, for whom, and under which circumstances, and driven by a diverse multi-stakeholder Board of Governors and a patient-centered mission. By providing feedback on what care is going to provide the best result to each patient, PCORI is generating invaluable information that will save our health care system significant expenditures by empowering patients to choose treatments that work best and therefore limit adverse events such as hospitalization and multiple courses of treatment.

We laud your leadership in taking action to achieve a long-term, fully-funded reauthorization of PCORI and look forward to engaging with you to finalize legislation to extend its patient-centered mission as soon as possible.

Sincerely,
