

ICD-10-CM Coordination and Maintenance Committee,
National Center for Health Statistics,
U.S. Centers for Disease Control and Prevention

3,193 sign petition to fix the catastrophic lack of ME/CFS case tracking in the U.S!

We have collected the following **3,193 petition signatures** from the ME/CFS community in support of the [joint proposal](#) submitted by our seven organizations (*) calling on the National Center for Health Statistics (NCHS) to fix the coding of myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS) in the US International Classification of Diseases (ICD-10-CM).

Today, 1-2.5 million Americans with ME/CFS are invisible in US mortality and morbidity tracking and in US research using electronic health records. This is the direct result of ICD-10-CM coding because the term ME/CFS, adopted federally and in US clinical guidance, is not listed at all while the term CFS, which most US doctors still use, has the same code as the symptom of “chronic fatigue, unspecified.”

Previous proposals were submitted in 2011, 2012, and 2018 to NCHS to fix this problem. But all three were rejected because of a lack of consensus on how to resolve it, particularly regarding the term “chronic fatigue syndrome.” To avoid having a fourth proposal rejected, the seven organizations have submitted a [new proposal](#) (**) that asked for the most basic changes possible - to add the term ME/CFS and to expand the G93.3 category to encompass non-viral causes.

To the organizations’ proposal, NCHS then recommended [additional ICD-10-CM coding changes](#). These include changes that resulted in previous proposals being rejected because of lack of stakeholder consensus on how to resolve the coding problem. We acknowledge the concerns raised about these additional changes. But even if there is a lack of consensus on some proposed changes, we are calling on NCHS to at least do the following:

- Approve at least the proposal as submitted by the seven organizations (**) even if there’s a lack of consensus on some of the additional coding changes proposed by NCHS.
- Implement this change in the April 2022 release because we are currently unable to track those patients who develop ME/CFS following COVID-19. If not implemented in April it should at least be implemented by the October 2022 release.
- Implement interim guidance for clinicians to use both the U09.9 and G93.3 codes for cases of post-COVID ME/CFS until this issue is addressed.

Given the potential tsunami of new ME/CFS cases that could develop following COVID, it is imperative that we finally fix the ICD coding of ME/CFS. **After 10 years, we must find a way to finally start tracking this devastating disease.**

*The seven organizations include:

- International Association for Chronic Fatigue Syndrome/Myalgic Encephalomyelitis,
- Open Medicine Foundation,
- Solve M.E.,
- #MEAction,
- Massachusetts ME/CFS & FM Association,
- Minnesota ME/CFS Alliance, and

- Pandora Org
- New Jersey ME/CFS Association also endorses this proposal

** The [changes proposed](#) by the seven organizations include:

- Expand the lead term for G93.3, post-viral fatigue syndrome to accommodate non-viral causes of ME/CFS
- Remove “benign” from the term “myalgic encephalomyelitis”
- Provide separate subcodes (G93.3n) for post-viral fatigue syndrome and myalgic encephalomyelitis
 - o Per ICD convention, we also proposed a subcode for “other” conditions outside these.
- Add the terms “myalgic encephalomyelitis/chronic fatigue syndrome” and “ME/CFS” as inclusions (essentially a synonym or related condition) of myalgic encephalomyelitis because this is the term adopted in the US
- Revise and add exclusion terms as needed
